Credit Name::CSE 2110 Procedural Programming 1
Assignment Name::House and MetricConversion

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

I read the instructions for both exercises. The House program needed three methods to draw a house, and MetricConversion needed eight different measurement conversions.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I was confused about how to create separate methods and how to use the switch statement. I solved this by breaking the programs into smaller parts.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

Yes, I planned each program before coding. For House, I started with the roof, base, and walkway. For MetricConversion, I started with the input, menu, and conversion methods.

How did you decide on the tools, data structures, or algorithms to use?

I used Java methods, Scanner, System.out.println(), and a switch statement to complete both programs.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

I wrote the code in small pieces and tested each part to make sure it worked.

How did you test your solution along the way to make sure it was working?

I ran both programs in Eclipse. I checked if the house displayed correctly and tested different numbers and conversion choices.

Overcoming Challenges

What part of the problem was the most difficult for you?

The hardest part was making all the methods work correctly and making sure the measurement formulas were correct.

How did you handle moments when you felt stuck or unsure of what to do next?

I checked my code carefully, looked for syntax errors, and fixed missing semicolons or quotation marks.

Learning

Was there anything you learned that you think will help you with future challenges?

I learned how to create and use methods, use a switch statement, accept user input, and fix syntax errors. These skills will help me with future Java programs.
