

Credit Name:Programming

Assignment Name:Eggs and Grade

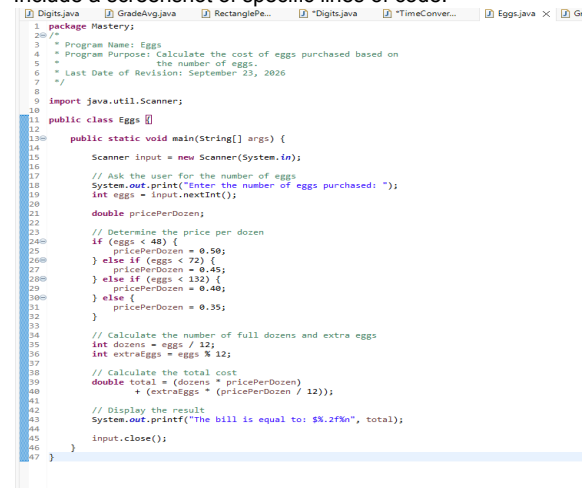

Error Log Entry

What error message did you encounter (if any)? I did not get an error message.

What unexpected behavior did your program exhibit? Both programs worked correctly after testing them.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.) I did not have a major issue. I just had to make sure the prices and grade ranges were correct.

Include a screenshot of specific lines of code.

```
1 package Mastery;
2
3 * Program Name: Eggs
4 * Program Purpose: Calculate the cost of eggs purchased based on
5   the number of eggs.
6 * Last Date of Revision: September 23, 2026
7 */
8
9 import java.util.Scanner;
10
11 public class Eggs {
12
13     public static void main(String[] args) {
14
15         Scanner input = new Scanner(System.in);
16
17         // Ask the user for the number of eggs
18         System.out.print("Enter the number of eggs purchased: ");
19         int eggs = input.nextInt();
20
21         double pricePerDozen;
22
23         // Determine the price per dozen
24         if (eggs < 48) {
25             pricePerDozen = 0.50;
26         } else if (eggs < 72) {
27             pricePerDozen = 0.45;
28         } else if (eggs < 132) {
29             pricePerDozen = 0.40;
30         } else {
31             pricePerDozen = 0.35;
32         }
33
34         // Calculate the number of full dozens and extra eggs
35         int dozens = eggs / 12;
36         int extraEggs = eggs % 12;
37
38         // Calculate the total cost
39         double total = (dozens * pricePerDozen)
40             + (extraEggs * (pricePerDozen / 12));
41
42         // Display the result
43         System.out.printf("The bill is equal to: $%.2f\n", total);
44         input.close();
45     }
46 }
47 }
```

How did you fix the issue?

I checked my calculations and tested both programs with different numbers.

Provide the corrected code or solution using a screenshot.

```
31 input.close();
```
