Credit Name:CSE 2110 Procedural Programming 1
Assignment Name:PrimeNumber and Investment

The following questions can help you in thinking critically about your problem-solving processes:

How did you approach understanding the challenge?

I broke both problems into smaller steps. For PrimeNumber, I needed to determine if a number was prime. For Investment, I needed to calculate how many years it would take for $2,500 to reach $5,000.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I was initially confused about how to check for prime numbers and how many times the investment calculation needed to repeat. I solved this by using the % operator for PrimeNumber and a while loop for Investment.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

Yes. I planned the input, processing, loop, and output for both programs before coding them.

How did you decide on the tools, data structures, or algorithms to use?

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

I worked on the programs in smaller sections and tested them as I went.

How did you test your solution along the way to make sure it was working?

I tested PrimeNumber with different prime and non-prime numbers. I tested Investment to make sure the amount increased by 7.5% each year and stopped when it reached at least $5,000.

Overcoming Challenges

What part of the problem was the most difficult for you?

The most difficult parts were understanding the prime number logic and making sure the Investment loop stopped at the correct time.

Learning

How did you handle moments when you felt stuck or unsure of what to do next?

I looked back at the instructions, checked my code, and tested different values to find and fix the problems.

Was there anything you learned that you think will help you with future challenges?

I learned how to use for and while loops, the % operator, and conditions to solve different types of problems. These skills will help me with future Java programs.
