

Credit Name:Variables and Constants

Assignment Name:Mastery

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge? I read the question very well i looked in the text book for infomation

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

There was multiple errors in my code but i figured how to fix them

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding? yes i took small steps to understand the code better

How did you decide on the tools, data structures, or algorithms to use? whatever best fitted what i needed

Implementation

Did you write the code in small pieces or attempt the entire solution at once? small pieces so i can go step by step and understand it

How did you test your solution along the way to make sure it was working? I made sure there were no errors and the code was clean

Overcoming Challenges

What part of the problem was the most difficult for you? When i would try to fix the error but it would not work still

How did you handle moments when you felt stuck or unsure of what to do next? I used ai to help me when i was stuck on a part or unsure

Learning

Was there anything you learned that you think will help you with future challenges? I used ai to help me when i was stuck on a part or unsure
